

UNDETECTABLE MOISTURE BARRIER FOR MUSEUM PROVIDED WITH BELZONA

CUSTOMER

Historic Museum, Teesside, UK

APPLICATION DATE

2010

APPLICATION SITUATION

The museum, a Grade 2 listed site, is financed by the local Borough Council, who wanted to convert some of the buildings into educational workshops for visitors.

PROBLEM

On the external walls of the East Lodge building, it was found that moisture ingress from driving rain quickly destroyed the newly refurbished rooms, wasting a large portion of the budget. A cost effective weather proofing solution that would not affect the appearance of the buildings was required.

PRODUCTS

Belzona 5122 (Clear Cladding)

SUBSTRATE

Masonry and Brickwork

APPLICATION METHOD

Application was carried out in accordance with Belzona Know-How System Leaflet WPA-8.

BELZONA FACTS

Belzona 5122 offers an invisible water repellent barrier that allows the surfaces to breathe and improves the thermal performance of saturated walls by up to 40%. Approximately 270 square meters of the external walls were quickly treated with a simple application that minimised disruption to the museum visitors. The surface was immediately weatherproof and undetectable to the naked eye. The client was delighted with the results and the refurbishment to the rooms within could resume without further risk. The protection of the building was reassessed 6 years later and found to still be working perfectly.
