

BELZONA PROTECTS WASTE WATER TANK

ID: 1098

Industry: Pulp & Paper
Application: TCC-Tanks and Chemical Containment Areas
Substrate: Carbon Steel
Products: * Belzona® 1121 (Super XL-Metal) ,
* Belzona® 5811 (Immersion Grade) ,

Customer Location: Pulp Factory, Southern Germany
Application Date: June to December 2007

Problem

Tar epoxy coating had failed especially in vapour phase due to limited chemical resistance against Sulfite solutions. Corrosion had led to more than 1000 holes in roof and leaks in side walls.

Photograph Descriptions

- * 10600cbm tank ,
- * Welded steel plates during crack testing ,
- * Rebuilding of pitted surface with Belzona® 1121 ,
- * Hot sprayed surfaces with Belzona® 5811 before scaffold was taken out ,

Application Situation

10,600 cubic metre waste water tank with inner surface of 3000m² containing waste water from pulp production.

Application Method

Failed coating was removed by ultra-high pressure water jetting and grit blasting. Steel plates were welded in tank to guarantee mechanical integrity. Rebuilding of pitted steelwork carried out in accordance with Belzona Know-How System Leaflet TCC-5. Coating by heated airless spray in 2 layers.
