

BELZONA RECTIFIES LEAKAGE PROBLEM IN A BIOREACTOR CLARIFIER

ID: 131

Industry: Chemical & Petrochemical
Application: TCC-Tanks and Chemical Containment Areas

Customer Location: Petrol Refinery in Thailand
Application Date: January and February, 1996

Substrate: Concrete and Steel

Products: * Belzona® 5811 (Immersion Grade),
* Belzona® 4111 (Magma-Quartz),
* Belzona® 2221 (MP Fluid Elastomer),

Problem

Bottom of the tank had to be made waterproof and an expansion joint incorporated where the concrete floor meets the steel tank wall.

Photograph Descriptions

- * Concrete being repaired with Belzona® 4111 ,
- * First coat of Belzona® 5811 being applied ,
- * Expansion joints masked off and pouring of Belzona® 2221 commenced ,

Application Situation

Steel bioreactor clarifier tank 100' diameter (31m) with a concrete bottom, split into six segments

Application Method

Application carried out in accordance with Belzona® Know-How Leaflets TCC-9, TCC-11, TCC-12 and TCC-15

Belzona Facts

Replacement of the tank was too expensive even to consider. Other options that were considered included using a glass flake system to coat the tank and welding a steel bottom onto the walls of the tank. The cost of this method would have been about £370,000. The Belzona® solution cost only £80,000, a saving of almost £300,000, and took a fraction of the time estimated for the welded repair.
