

BELZONA ANCHORS NEW RUDDER BUSHES IN POSITION

ID: 253

Industry: Marine
Application: SOS-Ships and Offshore Structures

Customer Location: Shipping - International car transporter
Application Date: April 2000

Substrate: Synthetic bearing and steel
Products: * Belzona® 1321 (Ceramic S-Metal) ,

Problem

The original bushes were bronze and had caused galvanic corrosion of the housing within one year, becoming loose.

Photograph Descriptions

- * Condition of corroded housing before repair ,
- * Installation of the synthetic bearing, using Belzona 1321 as both adhesive and coating and "screwing" bearing into the housing ,
- * Completed repair ,
- * Location of the slider on top of the rudder flap ,

Application Situation

Becker flap rudder slider bearings.

Application Method

The application was carried out in accordance with a modified version of Belzona Know-How System Leaflet SOS-9. Belzona®1321 functions as structural adhesive, support, and coating in this application.

BELZONA®
Repair • Protect • Improve

Belzona Facts

This method significantly reduced the installation time and cost for bearing replacement, and extended the lifetime of the component, by eliminating future galvanic, crevice, or general corrosion from this part of the rudder. Four rudders were repaired in less than a week and Belzona is used from new to prevent these problems.
