BELZONA EXTENDS THE LIFE OF THIS TRUNION END BEARING

ID: 281

Industry: Pulp & Paper Customer Location: Pulp Mill in Alberta, Canada

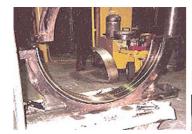

Application: MPT-Mechanical Power Transmission Application Date: 1996

Substrate: Cast Iron

Products: * Belzona® 1111 (Super Metal),

Problem

The lubrication system failed on the trunion end bearing on a 4-ton lime kiln, wearing through the entire bronze liner and into the cast iron pillow block.

Photograph Descriptions

- * Pillow block damage evident,
- * Trial fit of new bronze liner,
- * Rebuilt cast iron using a forming technique,

Application Situation

Trunion end bearing for a 40-ton lime kiln.

Application Method

The application was carried out in accordance with Belzona Know-How System Leaflet MPT-7. Side shields, C-clamps and infrared lights were used to speed up the cure time.

Belzona Facts

The cost of a new cast iron trunion is approximately \$20,000. Replacement of a new trunion was considered, but weeks of procurement time eliminated that possibility because the lime kiln was shut down. The pro-file was restored by using Belzona® 1111 (Super Metal).
