- * Application in progress ,
- * Completed application ,

Application Situation

Leaking 600 m2 flat roof

Application Method

Application carried out in accordance with Belzona Know-How System Leaflets RPA-1, 6, 7 & 8.

Belzona Facts

The application took only 3 days to complete. Despite the harsh and snowy winter of 2010/2011, the roof is still completely watertight today and the customer is very satisfied with the result. In contrast to commonly used weatherproofing materials, the cold applied, microporous Belzona system allowed for seamless encapsulation of the roof, adapting to the complex, irregular roof contours as well as roof movements.
