Belzona Facts

This application was also completed on two other luxury liners in the company's fleet, both with great success. The applications were carried out on site, with minimal downtime and the solvent-free solution proved to be of great benefit due to the confined location of the heat exchanger on-board the cruise liner. As of 2017, the company managing the HVAC components revealed that the Belzona systems were still in excellent condition, praising the good work of the Belzona application team.
