- * View of completed wash area ,

Application Situation

Non-slip safety system required on quarry tiled dish washroom and food preparation area floors which were constantly wet.

Application Method

Application was carried out in accordance with Belzona Know-How System Leaflet FPA-8.

Belzona Facts

Because the floors were constantly wet, there was always a threat that a serious accident could take place at any moment. A non-slip coating had been applied to other areas of the kitchen floor but this had proved to be ineffective over the long term. The coating had also started to loose adhesion in various places increasing the possibility of bacteria growth between it and the tiles beneath.
