

BELZONA SAVES CRITICAL EQUIPMENT AT ZINC MINE

ID: 4605

Industry: Mining & Quarrying

Customer Location: Zinc Mine, Namibia

Application: TCC-Tanks and Chemical Containment Areas

Application Date: December 2010

Substrate: Mild Steel

Products: * Belzona 1111 (Super Metal) ,

Problem

Wear on the riding ring of the primary ore mill resulted in the development of a hole. This allowed leakage of slurry into the mill gearbox lubrication system. As this was a single stream mill, this was a critical piece of equipment and needed to be returned to service immediately.

BELZONA
Repair • Protect • Improve

Belzona 1111 quickly sealed the leaking areas, preventing further contamination and allowed the critical part to return to service faster than conventional repair techniques, saving the customer in downtime and resulting production losses. After three years the repaired area was inspected and is still in perfect condition.
