BELZONA REBUILDS AND PROTECTS TURBINE RUNNER

ID: 6071

Industry: Power Customer Location: Hydroelectric Plant, Jokkmokk, Sweden

Application: CEP-Centrifugal Pumps Application Date: 2014

Substrate: Cast iron

Products: * Belzona 1311 (Ceramic R-Metal),

* Belzona 1321 (Ceramic S-Metal),

Problem

Constant use had damaged the vulnerable cast iron substrate of the impellers. The client needed a quick, long-term solution to avoid downtime to their plant.

Photograph Descriptions

- * Turbine housing entrance,
- * Cavitation damage to the runner,
- * Close-up of the damage,
- * Completed application ,

Application Situation

Two impeller runner blades had suffered severe cavitation and erosion damage.

Application Method

Application was carried out in accordance with Belzona Know-How System Leaflets CEP-1 and CEP-3. Surfaces were grit blasted prior to rebuilding with Belzona 1311 to restore profiles and coating with Belzona 1321 to provide long-term protection.

Belzona Facts

The Belzona solution is cold-applied and simple to use, which meant that repairs and the application could be performed in-situ, avoiding costly disassembly work which would force a long downtime period. Force curing Belzona allowed the plant to return to operational status as quickly as possible, whilst the Belzona application offers a long-term, durable solution.
