

BELZONA REPAIRS SHIPS GENERATOR AFTER WELD REPAIR FAILS

ID: 651

Industry: Marine
Application: ENC-Engines and Casings
Substrate: Cast iron
Products: * Belzona® 1111 (Super Metal) ,

Customer Location: Cruise Line, Port Everglades, Florida
Application Date: November 2005

Problem

Damaged generator casing allowing coolant into main sump threatening ships main engine bearings.

Photograph Descriptions

- * Generator with cylinder removed ,
- * Surface surrounding failed weld roughened ,
- * Belzona® 1111/9341 patch applied over weld repair and extended onto surrounding area ,
- * Final repair smoothed out and awaiting Infrared lamp to accelerate cure ,

Application Situation

Main generator oil sump which is shared with ships main engine. Initial weld repair failed.

Application Method

Application carried out in accordance with Belzona Know-How System Leaflet ENC-1. Particular attention paid to removing all substrate contamination using solvent washing and heat.

Belzona Facts

Classic failure of welding cast iron. Ship sails nightly but re-work completed in 5 hours keeping ship on schedule at full power. Customer is delighted with Belzona!
