

Belzona has what it takes to stop the acid leak

ID: 7911

Industry: Chemical & Petrochemical
Application: VPF-Valves, Pipes and Fittings
Substrate: Steel
Products: * Belzona 4301 (Magma CR1 Hi-Build),

Customer Location: Huelva - Spain
Application Date: June 2018

Problem

In the gas suction line condensation of the acids on the internal surface has caused severe corrosion, leading to leaks, which are hazardous to the surrounding environment.

Photograph Descriptions

- * 1. Location of equipment within the acid plant ,
- * 2. Close up of defect ,
- * 3. Belzona 4301 being applied ,
- * 4. Completed repair ,

Application Situation

In a Copper production acid plant, pipework in a gas washing process carries acid contaminated gases.

Application Method

Application is carried out using a modified version of Belzona System Leaflet VPF-11. The surface was prepared using mechanical tools and was cleaned with acetone to remove surface contaminants.

Belzona Facts

The damage is localized to a small area on a large section of pipework. Replacing is a costly and work intensive exercise. Weld repairs are likely to lead to the same problem occurring again. Access for heavy welding equipment is also difficult, and hot work is
