Photograph Descriptions

- * Overview of the damaged area ,
- * Surface preparation ,
- * Defect area marked out and debris removed ,
- * Completed application ,

Application Situation

End flanges of a floating hose are subjected to a severely corrosive and erosive environment at sea. The hose has been brought back to shore for routine maintenance.

Application Method

Application was achieved out in accordance with Belzona Know How System Leaflet VPF – 9. The surface of the flange (defect area) was properly prepared with the bristle blaster surface preparation tool to achieve adequate surface roughness and Sa 2.5 cleanliness. Belzona 9111 was used to remove any debris from the flange defect area after the surface was successfully prepared and allowed to dry. Belzona 1212, excellent surface tolerant product was applied to rebuild to a desired shape and form.
