Solving the Sealing Problem on the Roof of the Fuel Storage Tank with Belzona

ID: 8708

Industry: Oil & Gas

Application: TCC-Tanks and Chemical Containment

Areas

Substrate: Aluminium

Products: * Belzona 9111 (Cleaner Degreaser),

* Belzona 9311,

* Belzona 3921 (GSC Surface Conditioner),

* Belzona 3111 (Flexible Membrane),

Problem

Rainwater was leaking from the external surface of the tank roof through the seams. The client tried to use a differnt system to fix the problem, although that solution was unsucessful.

Customer Location: Tank Farm, TURKEY

Application Date: April 2021

BELZONI

This application was carrired out in accordance with a modified version of system leaflet TCC-04. After decontamination of the previously applied and unsuccessful systems, surface preparation and then cleaning with the Belzona 9111 was carried out on the application subsrate. Belzona 3921 conditioner was then applied to the substate to ensure the Belzona 3111 would ahere. In order to ensure tightness, Belzona 3111 was applied in two layers, incorporating Belzona 9311 reinforcement tape.

Belzona Facts

The leakage test performed after the application was successful. The customer was very satisfied with this result, and the same successful application was then repeated on a further 2 tanks in the storage facility.
