

Belzona provides cavitation repair and protection for a large hydropower unit impeller

ID: 9115

Industry: Power

Customer Location: a large hydropower plant in Hunan, China

Application: FBC-Fans, Blowers and Compressors

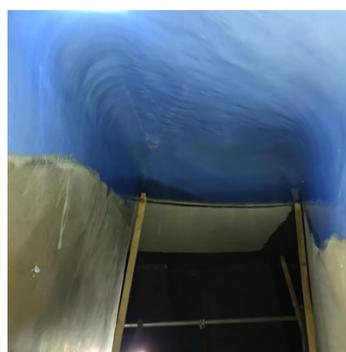

Application Date: March 2022

Substrate: Stainless-steel

Products: Belzona1311, Belzona1341, Belzona2141, Belzona2941,

Problem

Cavitation occurs at the top of Francis impeller in a hydropower station unit

application completed

Application Situation

The hydropower station locates in the main stream of Yuan River, the capacity of which is 2.4 million kW.

Application Method

The application was carried out in strict accordance with Belzona Know How leaflets FBC-1 and FBC-2. Belzona 1311 was used to repair the cavitation areas after grit blasting. Then, applied two coats of Belzona 1341 to improve fluid efficiency for the equipment. Finally, Belzona 2941 and Belzona 2141 were applied to protect the outer surface against cavitation and corrosion.

Belzona Facts

The impellers have been affected by cavitation for many years. In the past, they were repaired by welding every two years. After a period of time, cavitation occurred again. This caused repeated deformation of the impellers, resulting in power generation
