

BELZONA REPAIRS AND PROTECTS DEMINERALISATION CHANNELS

ID: 917

Industry: TCC-Tanks and Chemical Containment Areas

Customer Location: Nuclear Power Plant, Lancashire, UK
Application Date: October 2007

Substrate: Concrete

Products: * Belzona 4181 (AHR Magma-Quartz),
* Belzona 4911 (Magma TX Conditioner),

Problem

The concrete channel was deteriorated from the acid. A previously applied protective coating had failed and allowed the concrete substrate to be attacked. This caused severe holes and damage to the channels.

Photograph Descriptions

- * Damaged concrete substrate ,
- * Close up of damaged reinforced concrete substrate ,
- * Filling in the prepared holes using Belzona 4181 ,
- * Completed channel ,

Application Situation

A channel used to contain and transport sulphuric acid.

Application Method

The application was carried out in accordance with Belzona Know-How System Leaflet TCC-9.

BELZONA
Repair • Protect • Improve

Belzona Facts

Time constraints due to demands on energy generation meant that Belzona were only allocated a short period of time for the repair work. Keeping to a schedule and force curing the product meant the power station incurred no fines for not being available to generate power when required.
