

# BELZONA PROVEN PROTECTION OF STEAM TURBINE

ID: 1290

Industry: Power

Customer Location: Vladimirsky Power Plant/ Russia

Application: CEP-Centrifugal Pumps

Application Date: July 2003

Substrate: Steel/Cast iron

Products: <div>Belzona® 1111 (Super Metal)</div><div>Belzona® 1391 (Ceramic HT Metal)</div>

## Problem

After more than 35 years (253.000 hours) in-service, inspection during shutdown in 2003, revealed that turbine faced severe stream erosion caused by humid steam. Damages were up to 8 mm wide and 10 mm deep.

## Photograph Descriptions

\* Grit blasting underway , \* After blasting extent of damage clearly evident , \* Application of Belzona® 1391 , \* Completed job ,

## Application Situation

Diaphragm and channels under the end journal of medium pressure steam turbine.

## Application Method

Application was carried out in accordance with a modified version of Belzona Know-How System Leaflets CEP-3 & -5.

## Belzona Facts

After 5 years in-service turbine has been inspected (July 2008) and results were very satisfactory. Channel around the nozzle blades had been preserved 95-100%. Also Belzona® 1391 on the rebuilt areas was practically undamaged. In a zone of phase transition, minor damages were easily repaired.

Testimonial from client expressed complete satisfaction and further use of Belzona planned on other stages of the turbine.
