BELZONA REPAIRS HYDROGEN COOLERS AND PIPING

ID: 197

Industry: Power Customer Location: Power plant in Texas, U.S.A.

Application: HEX-Heat Exchangers Application Date: May 1999

Substrate: Steel

Products: * Belzona® 1121 (Super XL-Metal),

* Belzona® 1341 (Supermetalglide),

Problem

Years of erosion-corrosion on uncoated turbine cooler parts forced this customer to seek a repair solution as opposed to the high costs associated with replacement.

Photograph Descriptions

- * Close-up of erosion-corrosion in hydrogen coolers,
- * Erosion-corrosion in hydrogen piping,
- * Cooler heads being rebuilt with Belzona® 1121,
- * Finished pieces overcoated with Belzona® 1341,

Application Situation

Erosion-corrosion on hydrogen coolers and piping

Application Method

Application was carried out out in accordance with Belzona Know-How System Leaflets HEX-2 and VPF-2.

Belzona Facts

Use of Belzona® 1121 (Super XL-Metal) overlayed with Belzona® 1341 (Supermetalglide) allowed the hydrogen coolers to be repaired in a two-day process.
