

BELZONA IMPROVES PROTECTION AT BASE OF CHIMNEYS

ID: 2946

Industry: Power
Application: ENC-Engines and Casings
Substrate: Steel and concrete
Products: * Belzona® 3211 (Lagseal) ,
* Belzona® 5811 (Immersion Grade) ,

Customer Location: Municipality, Sweden
Application Date: September 2011

Problem

The chimneys are made of steel and are resting on a concrete base. Moisture between the chimney and the supporting concrete resulted in corrosion taking place on the chimney as well as a high risk for frost heave in the concrete.

Photograph Descriptions

- * Chimney Base for the furnace before the repair ,
- * Application of Belzona® 3211 ,
- * Reinforcement sheet incorporated into the Belzona® 3211 coating bridging the steel/concrete junction ,
- * The finished application with Belzona® 5811 providing corrosion protection on the steel chimney ,

Application Situation

Three Chimneys for furnaces.

Application Method

Application was carried out in accordance with Belzona Know-How System Leaflets GSS-3 and TCC-5. After grit blasting the repair area, the steel was protected with Belzona® 5811 and the Belzona® 3211 reinforced system was applied across the junction between steel and concrete.

Belzona Facts

Belzona micro-porous Membrane systems are extensively used to provide weather-proofing of tank bases so as to prevent under-tank corrosion, the same arrangement and problems as found on these chimneys. The system prevents water entering whilst allowing any existing moisture to dry out.
