

BELZONA SHAFT REPAIR AT STEEL MILL

ID: 3316

Industry: *General Industry*
Application: *MPT-Mechanical Power Transmission*

Customer Location: *Scotland, UK*
Application Date: *April 2012*

Substrate: *Steel*
Products: ** Belzona® 1111 (Super Metal) ,*

Problem

Heavy wear on the drive locations led to excessive downtime for the customer

Photograph Descriptions

- * Worn shaft prior to Belzona repair ,
- * Surface preparation carried out and the bottom former in place on the shaft ,
- * Former clamped in position and filled with Belzona® 1111 ,
- * Former removed revealing fully cured Belzona® 1111 prior to dressing down ,

Application Situation

Worn shafts in steel rolling mill

Application Method

Application was carried out in accordance with Belzona Know-How System Leaflet MPT-2. After thorough surface preparation, the Belzona® 1111 was applied by brush to the repair area. Next, a pre-made split former was clamped over the repair and additional Belzona® 1111 was injected via ports. The material was allowed to cure fully before the former was removed and the repair dressed down before returning to service

Belzona Facts

This in-situ shaft forming process saves the customer thousands of pounds in removal and replacement costs. The durable, proven solution provides an immediate solution, avoiding lengthy downtime.
