

BELZONA AVOIDS COSTLY DOWNTIME BY PATCHING FUEL BLADDERS

ID: 5265

Industry: General Industry

Customer Location: Alaska, USA

Application: SHM-Solids Handling Machinery

Application Date: 1983

Substrate: Fabric Reinforced Rubber

Products:
* Belzona 2221 (MP Fluid Elastomer) ,
* Belzona 2911 (Elastomer QD Conditioner) ,
* Belzona 9341 (Reinforcing Sheet) ,

Problem

Scrapes on the outer rubber layer of the large towable fuel bladders would allow water to wick into the fabric, weakening the fuel bladder.

Photograph Descriptions

- * Bladder showing damage and prepared for conditioner ,
- * Completed application ,

Application Situation

Damaged fuel bladders.

Application Method

Application was carried out in accordance with Belzona Know-How System Leaflet SHM-9. The surface was roughened and Belzona 2911 was applied and allowed to cure. Belzona 2221 was brushed on and Belzona 9341 was stippled in. Two hours later a final coat was brushed over the surface.

Belzona Facts

Patching the bladders was done by using a hot vulcanizer allowing them to do one patch at a time. Bladders with multiple scrapes could take a week or more to repair. With Belzona 2221 several bladders could be repaired every day, putting them back in service faster and saving thousands in labor.
