BELZONA STATIC DISSIPATIVE LINING FOR CHEMICALLY AGGRESSIVE ENVIRONMENT

ID: 6016

Industry: Chemical & Petrochemical Customer Location: Refinery, France
Application: TCC-Tanks and Chemical Containment Application Date: April 2012

Areas

Substrate: Carbon Steel

Products: * Belzona 4311 (Magma CR1) < br /> Belzona 4351 (Magma CR5),

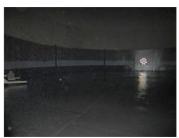

Problem

The client required a coating combining high chemical resistance and static dissipative characteristics in order to comply with safety regulations and eliminate the risk of tank's contents igniting.

Photograph Descriptions

Application Situation

One of the world's largest plastics, chemicals and refining companies required lining for storage tank containing chemical mixture including Xylene and Sulphuric acid at maximum temperature of 70°C.

Application Method

The application was carried out in accordance with Belzona Know-How System Leaflet TCC-5. After thorough surface preparation, a two layer system of Belzona 4311 was applied throughout the tank. Finally, across the tank's entire bottom and half a metre up the walls, the application was finished with a coat of Belzona 4351. Note that Belzona 4351 was sufficiently grounded.

Belzona Facts

Scaffolding was installed allowing for safe and effective application even at the full height of the tank. This solution reduced downtime, meaning the tank could be put into service in a very short time. Belzona system provided the required level of acid resistance combined with the need for static dissipation.
