Pump Diffuser Repaired Using Belzona 1300 Series

Industry:PowerApplication:CEP-Centrifugal PumpsSubstrate:Steel AlloyProducts:* Belzona 1311 (Ceramic R-Metal) ,
* Belzona 1341 (Supermetalglide) ,

Customer Location: Nova Scotia, Canada Application Date: May 2021

Problem

Corrosion and erosion form seawater was causing the leading edge of the diffuser vanes to wear away. Approximately 50 to 75mm of the leading edge was gone when this pump component was taken out for service. Weld repairs were not an option due to the steel alloy material.

Photograph Descriptions

- * 1. Pump diffuser in poor condition on vane leading edges and widespread pitting. ,
- * 2. Diffuser blasted and steel mesh tack welded into place to support Belzona 1311 rebuilding process. ,
- * 3. Leading edges of the vanes re-built with Belzona 1311. ,
- * 4. Diffuser fully coated with two coats of Belzona 1341 Supermetalglide. ,

Application Situation

Sea water cooling system pump for thermal power plant.

Application Method

The application was carried out in accordance with Belzona Know-How System Leaflet CEP-1 to repair the leading edges of the diffuser vanes, and CEP-3 to line the internal surfaces to protect from the effects of corrosion, erosion, cavitation and provide some efficiency enhancement.

Belzona Facts

The customer needed a very fast turnaround to return this pump component to service. Welding was also not a possibility due to incompatibilities with the alloy substrate. The high market price of steel also made this repair very economical.
