## **In-situ Repair of Cracks in Bus Fuel Tank**

ID: 9007

Industry: Transport
Application: TCC-Tanks and Chemical Containment

Areas

Substrate: Carbon steel
Products: Belzona 1212

**Problem** 

A bus diesel tank was cracked and leaking.

Customer Location: South India

Application Date: December 2021

Bus with fuel tank leakage problems

Cracked and leaking fuel tank

Fuel tank that has been repaired and is no longer leaking

## **Application Situation**

Repairing cracks in the diesel tank was time consuming and difficult on road.

## **Application Method**

Cold bond application was carried out using Belzona 1212 with a plate of the same curvature. Before application, the surface was treated according to the crack repair method shown in TCC-1 and roughened with mechanical tools.

## **Belzona Facts**

The repair using Belzona 1212 only took seven hours to get the bus moving again. This was an alternative repair system that reduced costs and downtime.
